

Third-Party Risk Management Services

Modern cybersecurity is about protecting critical data and networks -- even when it comes to your vendors and third-parties. RSI Security's Third-Party Risk Management services ensure that every vendor, contractor, and technology provider in your organizational ecosystem has a strong cyber defense posture.

We'll work with you and your partners to conduct a risk assessment that will uncover potential vulnerabilities, and help you select and implement the right cybersecurity and/or regulatory framework to meet industry-specific needs.

Collaboration

Shoring up your third-party ecosystem requires effective partnership and collaboration with your vendors. RSI Security will help lay a roadmap for risk reduction and facilitate meaningful partnerships with your partners.

Assessment

RSI Security will assess your entire vendor portfolio to spot out any weak points or opportunities for improvement. Our technical team consists of experienced cloud security experts that can accurately assess the security risk of every provider and partner that you work with.

Operationalization

Having a plan to reduce third-party risk isn't enough. You and your partners will need to operationalize the recommended cyber defense measures to meaningfully reduce risk. We'll help operationalize technologies and strategies across your vendor ecosystem.

Reduction

Ongoing risk reduction is a combination of a strong joint cybersecurity policy and leveraging the right technology at all times. RSI Security will help adapt your vendor ecosystem stance to evolving threats with technologies like threat detection and penetration testing.

Services

Vendor Assessment

RSI Security's business and technical team will work with you and your vendors to assess the health -- and potential risk -- of your entire cybersecurity partnership network. We'll audit your vendors' technology stack and conduct activities like penetration testing to gain a clear, holistic picture of how vulnerable your partners are to cyber attacks.

Risk Management

Once we understand your third-party ecosystem's cyber defense posture, RSI Security will help you implement the right risk management and reduction strategies. We'll work with key stakeholders on your team as well as your vendors to implement measures like access controls, multi-factor authentication, and ongoing cybersecurity training.

Managed Security

RSI Security can become your de facto cybersecurity team via managed security services. This includes working with your vendors and partners to make sure your cyber defense efforts are effective and in alignment. Our managed security services let you worry about the critical aspects of your business, while RSI Security works with your partners on an ongoing basis.

Regulatory Compliance

RSI Security has over 20 years of compliance experience and expertise. Industries from finance to healthcare are often subject to cybersecurity regulations that also cover third-parties. If your customer data gets hacked or stolen from your cloud vendor, you still might be responsible for fines and penalties. RSI Security will ensure you're in compliance at all times.

About RSI Security

RSI Security is a cybersecurity-focused technology and compliance advisory company that helps private and public sector organizations to effectively manage risk. RSI Security provides cyber engineering, assessments, advisory services, as well as technical testing to amp up client's security posture while mitigating business risk. Compliance services include PCI DSS, ASV, HIPAA, HITRUST, CMMC, NIST 800-171, NERC CIP, FISMA, GDPR, CCPA, SOC 2, and more.
