HIPAA

Compliance Services

The Health Insurance Portability and Accountability Act (HIPAA) outlines protected health information (PHI) and the method in which healthcare organizations need to secure it. HIPAA's cybersecurity and data protection standards must be central to every healthcare organization's overall operations.

In 2020, there were 642 large-scale healthcare data breaches— a 25% increase over the previous year. At RSI Security, we help enterprise healthcare entities protect sensitive patient data and maintain HIPAA compliance.

RSI Security's HIPAA Compliance Services

RSI Security is a full-service HIPAA compliance assessor and advisory company with over a decade of cybersecurity experience. Our HIPAA compliance services include:

Managed Firewall & UTM

Protect the perimeter and minimize core business cybersecurity risks with RSI Security's managed firewall services and unified threat management, including intrusion detection and prevention.

Threat and Vulnerability Management

We will diminish your attack surfaces by actively monitoring identified vulnerabilities, deploying patches, and scanning for new weaknesses that cyberthreats may exploit.

Managed Endpoint Security

RSI Security will ensure that your connected devices are protected by up-to-date security measures, with all the necessary patches deployed to eliminate vulnerabilities.

Managed Network Services

24/7 network monitoring identifies and responds to external cyberthreats, suspicious activity, and systems interruptions, along with notifications sent to alert administrators.

Network Penetration Testing

Our network penetration testing services simulate active cyberthreats to determine response effectiveness and patch any vulnerabilities before an actual intruder can exploit them.

HIPAA Security Awareness and Training

We'll ensure your staff is trained and educated to keep you up-to-date on current cyberthreat intelligence, cybersecurity developments, and HIPAA compliance changes.

Managed Incident Response

Our incident response team will investigate cyberattacks and suspicious events through forensic analysis to determine what occurred, mitigate losses, restore operations, and identify core business risk reduction opportunities.

Backup & Recovery Services

RSI Security offers backup and recovery services to help ensure that your critical data is never lost.

Identity and Access Management

RSI Security will implement identity and access management (IAM) software and security protocols to protect your IT environment. Strict authentication processes and access governance restrictions help ensure that activity conforms to user role configurations, attributes, and responsibilities.

IT Support/Helpdesk

RSI Security's call center and email support ticket system assists partners with technical support, minimizing operational downtime and improving productivity.

Risk Analysis of Your Patient Data Environment

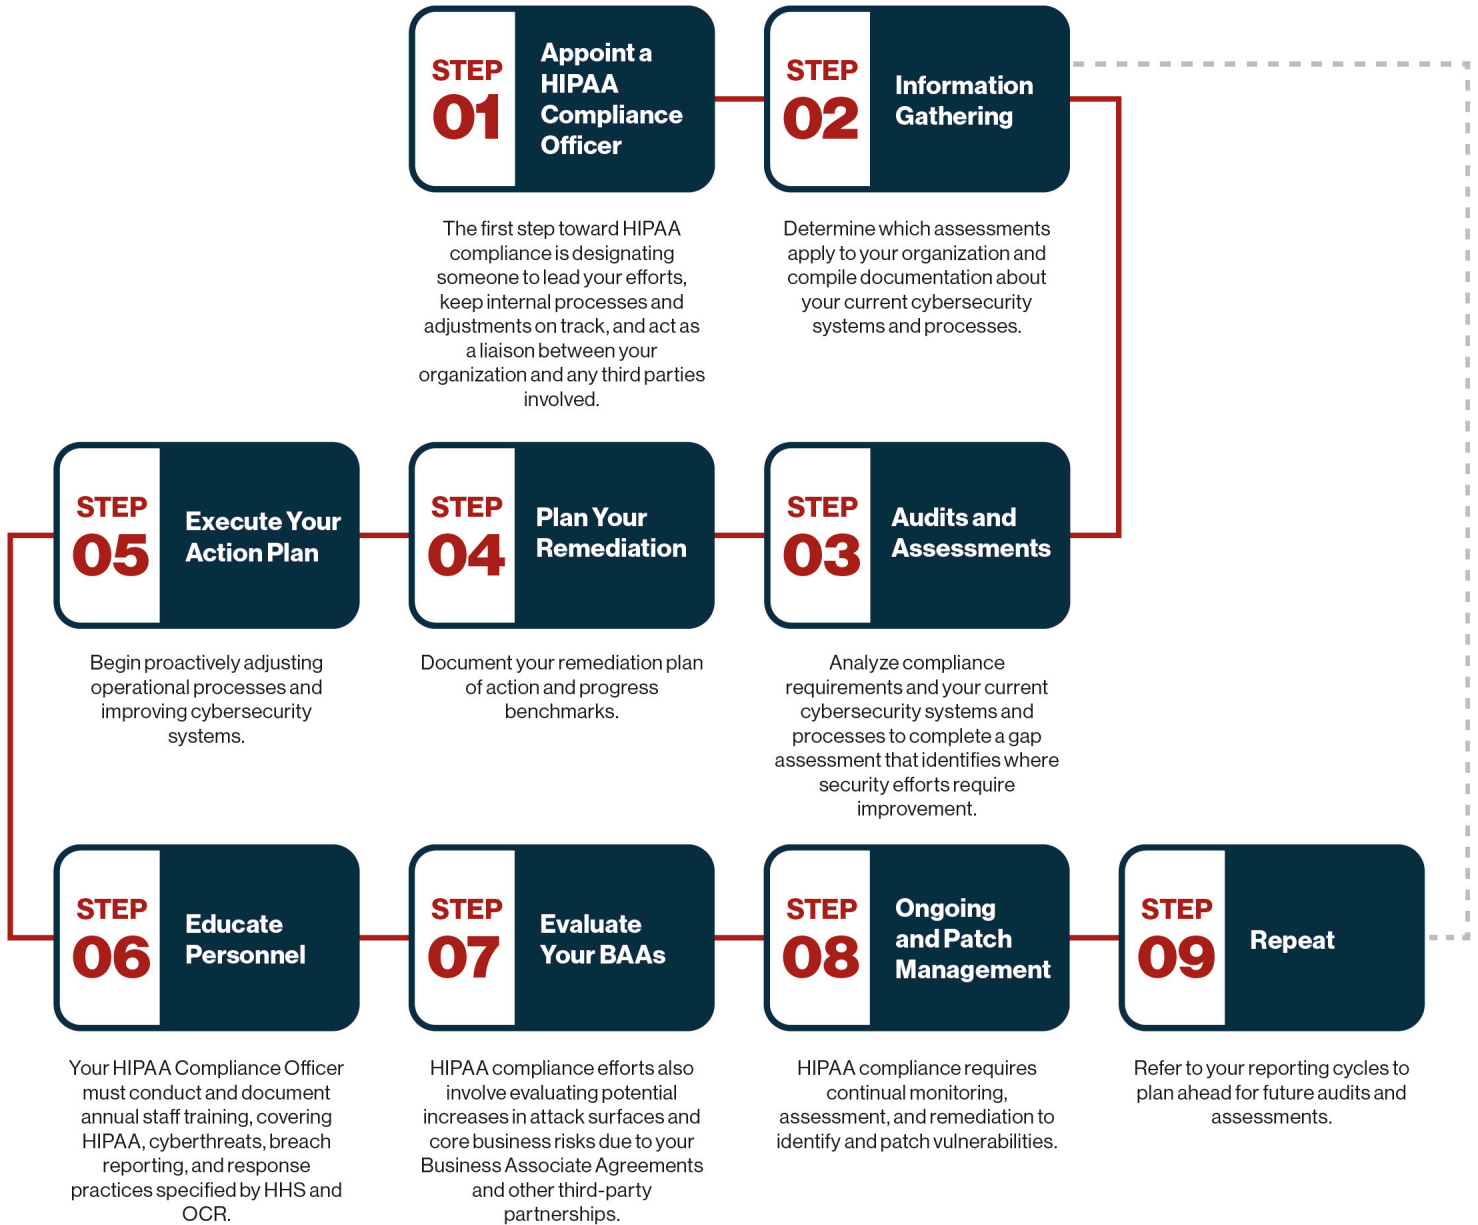

RSI Security will assess your patient data environment's cybersecurity and confidentiality risks according to specifications outlined in NIST SP 800-30's Guide for Conducting Risk Assessments and HIPAA compliance requirements.

HIPAA Security Rule Compliance Advisory

RSI Security will assess your handling and storage of PHI to verify that your organization's administrative, physical, and technical safeguards remain compliant with the HIPAA Security Rule.

Achieving HIPAA Compliance

Partnering with a HIPAA and IT security expert provides your organization with guidance and cyberthreat intelligence.

About RSI Security

For over a decade, RSI Security has systematized HIPAA compliance efforts and managed cybersecurity services for enterprise healthcare entities. We provide a thorough assessment of your cybersecurity infrastructure and offer expert recommendations to guide reporting and remediation efforts within complex environments. Connect with us to get started on ensuring HIPAA compliance and network security.
